- With only THB 46.15 million in liquid cash compared to THB 1,747.44 million in current debt, the current ratio is dangerously low at 0.17x, causing big liquidity risks.
- Leverage increased to 2.89 times while total equity fell to THB 932.51 million, raising default and refinancing risks to an intolerable degree.

In conclusion, there are massive credit and repayment risks associated with MUD. Investors should avoid their debentures and look for businesses with safer balance sheets and better cash flow, like the BTS and SAWAD debentures.
